

BUSINESS REQUIREMENTS DOCUMENT

Timekeep — Employee Time & Leave Management System

FAC Services LLC | Prepared by Vibhor Dharmadhikari, Business Analyst | Version 1.0 | June 2026

DOCUMENT CONTROL

Document Title	Timekeep — Business Requirements Document
Version	1.0 — Initial Release
Status	Final — Approved
Prepared By	Vibhor Dharmadhikari — Business Analyst
Organisation	FAC Services LLC
Date	June 2026
Reviewed By	Project Sponsor / HR Director

1. EXECUTIVE SUMMARY

FAC Services LLC identified a critical operational need to replace its fragmented, manual time-tracking and leave management processes with a unified, web-based platform. Employees across multiple departments were recording working hours in disconnected spreadsheets, submitting leave requests via email, and receiving no real-time visibility into their leave balances or project time allocations. This created significant administrative overhead, reporting inaccuracies, and compliance risk around overtime entitlements.

This document defines the business requirements for Timekeep — a centralised Employee Time and Leave Management System. Timekeep consolidates timesheet management, project-based time allocation, overtime tracking, and leave administration into a single role-based platform serving 500+ employees across FAC Services LLC.

This Business Requirements Document (BRD) was developed through a series of stakeholder elicitation sessions, client workshops, and sprint-based feedback cycles. All requirements have been validated against stakeholder expectations and are ready for handover to the development team.

2. BUSINESS CONTEXT & PROBLEM STATEMENT

2.1 Current State — As-Is Process

Prior to Timekeep, FAC Services LLC relied on the following manual processes:

- Employees recorded working hours in individual Microsoft Excel spreadsheets, submitted weekly to their line manager via email
- Project time allocation was tracked separately by project managers in standalone files with no integration to employee timesheets
- Leave requests were submitted via email to HR or the employee's manager, with no centralised tracking or audit trail
- Leave balances were maintained manually by HR in a master spreadsheet, updated reactively as requests were approved
- Overtime was calculated manually by HR at month-end, with no system-enforced distinction between chargeable and non-chargeable project overtime
- Managers had no real-time visibility into team availability, project hours consumed, or leave patterns

2.2 Business Problems Identified

- **Data Inaccuracy:** Manual spreadsheet processes produced frequent errors in timesheet calculations and leave balance tracking
- **Overtime Compliance Risk:** No systematic enforcement of the business rule that overtime premium pay applies only to chargeable project employees — resulting in incorrect payroll processing
- **No Real-Time Visibility:** Managers and HR lacked real-time dashboards for project utilisation, employee availability, and leave status
- **Administrative Overhead:** HR spent significant time each week consolidating timesheet data, processing leave requests, and resolving discrepancies
- **Audit Trail Gaps:** No documented approval workflow for leave or timesheet submissions — creating compliance and audit risk

2.3 Business Objectives

1. Implement a centralised, role-based web platform for all employee time and leave management activities
2. Automate overtime pay eligibility calculations with enforced business rules distinguishing chargeable from non-chargeable project hours
3. Provide managers and HR with real-time dashboards for project utilisation, chargeable hours, and leave balances
4. Eliminate manual spreadsheet processes and associated data quality risks
5. Create a full audit trail for all timesheet submissions and leave approvals

3. PROJECT SCOPE

3.1 In Scope

- Weekly timesheet entry — employees log daily hours against assigned projects
- Multi-project time allocation — employees can allocate hours across multiple projects within a single working day
- Project-based time tracking — distinguishing chargeable and non-chargeable project hours

- Overtime tracking with business rule enforcement — overtime premium applicable to chargeable project employees only
- Leave request submission, approval workflow, and leave balance tracking
- Role-based access control — Employee, Manager, and HR/Admin role tiers
- Manager and HR dashboards — chargeable hours, non-chargeable hours, team availability, leave status
- Email notifications for timesheet submissions, leave request status changes, and approval actions
- Audit trail — full history of all timesheet edits and leave approval decisions

3.2 Out of Scope

- Payroll system integration — Timekeep will export data; payroll processing remains in the existing payroll system
- Mobile application — web browser access only for initial release
- Project creation and employee-to-project assignment — managed externally by project managers
- Third-party calendar integration (e.g. Outlook, Google Calendar)
- Performance management or appraisal functionality

4. STAKEHOLDERS

Role	Responsibilities & System Interaction	Approx. Count
Employee	Submits weekly timesheets; logs hours against projects; submits leave requests; views personal leave balances and remaining entitlements	~450
Line Manager	Reviews and approves employee timesheets; approves or rejects leave requests; views team chargeable and non-chargeable hours; monitors team availability	~40
HR Administrator	Full system access; manages leave types and entitlements; approves certain leave categories (e.g. maternity, military duty); generates reports; manages user roles	~8
System Administrator	Manages user accounts, roles, and system configuration; maintains audit logs	~2
Business Analyst	Vibhor Dharmadhikari — requirements elicitation, documentation, UAT coordination, and sprint demo facilitation	1

5. USER ROLES & ACCESS CONTROL

Timekeep operates on a role-based access control (RBAC) model. Access to screens, data, and actions is determined by the user's assigned role. The following role tiers are defined:

5.1 Employee Role

- View and complete weekly timesheet — log hours by project and day
- View assigned projects and remaining available hours per project
- Submit leave requests — select leave type, dates, and supporting notes
- View personal leave balances — total entitlement, used, and remaining days per leave type
- View status of submitted leave requests (Pending / Approved / Rejected)

Employees cannot view other employees' timesheets, leave data, or chargeable hour summaries.

5.2 Manager Role

- All Employee role capabilities
- View team timesheet submissions — approve or reject with mandatory comments
- View chargeable and non-chargeable hours breakdown by employee and project
- Approve or reject leave requests for direct reports
- View team availability calendar — who is on leave, on project, or available
- Generate team-level reports — hours by project, by employee, by date range

5.3 HR / Admin Role

- All Manager role capabilities
- Manage leave types, entitlements, and accrual rules
- Approve leave categories requiring HR sign-off (maternity, paternity, military duty, jury duty)
- View organisation-wide dashboards — total chargeable hours, leave liability, headcount by project
- Export timesheet and leave data to CSV for payroll processing
- Manage user accounts — create, deactivate, assign roles
- Access full audit trail — all timesheet edits, leave decisions, and system changes

6. FUNCTIONAL REQUIREMENTS

Requirements are classified by priority: High (must have for go-live), Medium (important but not blocking), Low (future enhancement).

ID	Requirement Description	Priority	Source
FR-001	The system shall allow employees to log working hours on a weekly timesheet, organised by day (Monday to Sunday)	High	HR Director
FR-002	The system shall allow employees to allocate hours across multiple projects within a single day — each project listed as a separate line entry with individual hour fields	High	Sprint Demo Feedback
FR-003	The system shall display a running weekly total of hours entered, updating in real time as entries are made	High	Employee Stakeholders
FR-004	The system shall allow employees to save a draft timesheet and submit it for approval once complete	High	HR Director
FR-005	The system shall notify the employee's line manager via email when a timesheet is submitted for approval	High	Manager Stakeholders
FR-006	The system shall allow managers to approve or reject submitted timesheets — rejections must include a mandatory comment explaining the reason	High	Manager Stakeholders
FR-007	The system shall notify employees via email of timesheet approval or rejection, including rejection comments	High	Employee Stakeholders
FR-008	The system shall track overtime hours — defined as any hours worked beyond 40 hours in a standard working week	High	HR Director
FR-009	The system shall apply overtime premium pay eligibility ONLY to employees logging overtime on projects classified as Chargeable. Employees on Non-Chargeable projects are not eligible for overtime premium pay regardless of hours worked	High	HR Director
FR-010	Each project in the system shall be classified as either Chargeable or Non-Chargeable by the System Administrator at project setup. This classification shall be visible to Managers and HR but not to Employees	High	Business Rule
FR-011	The system shall flag overtime entries on chargeable projects in the manager's approval view, clearly distinguishing them from standard hours	Medium	Manager Stakeholders
FR-012	The system shall support the following leave types: Annual Leave, Sick Leave, Personal Time, Holiday, Maternity Leave, Paternity Leave, Military Duty, Jury Duty, Bereavement Leave, and Unpaid Leave	High	HR Director
FR-013	The system shall allow employees to submit leave requests specifying: leave type, start date, end date, and optional notes	High	Employee Stakeholders

FR-014	Leave approval routing shall be determined by leave type: (a) Annual Leave, Personal Time, and Sick Leave — approved by Line Manager; (b) Maternity Leave, Paternity Leave, Military Duty, and Jury Duty — approved by HR Administrator	High	HR Director
FR-015	The system shall display each employee's leave balances by leave type — showing total entitlement, days used, and days remaining — visible to the employee, their manager, and HR	High	Employee Stakeholders
FR-016	The system shall prevent employees from submitting leave requests that exceed their available balance for the requested leave type, displaying a clear error message	High	HR Director
FR-017	Approved leave dates shall be reflected in the manager's team availability view and blocked out on the team calendar	Medium	Manager Stakeholders
FR-018	The system shall send email notifications to the relevant approver when a leave request is submitted, and to the employee when a decision is made	High	All Stakeholders
FR-019	Managers shall have access to a dashboard displaying: total chargeable hours by employee, total non-chargeable hours by employee, overtime hours by employee, and current leave status per team member	High	Manager Stakeholders
FR-020	HR Administrators shall have access to an organisation-wide dashboard displaying: total chargeable hours across all projects, total non-chargeable hours, leave liability summary, and headcount by project	High	HR Director
FR-021	All dashboard data shall be filterable by date range, department, project, and employee	Medium	HR Director
FR-022	HR Administrators shall be able to export timesheet and leave data to CSV format for payroll processing	High	HR Director
FR-023	The system shall maintain a full audit trail of all timesheet submissions, edits, approvals, and rejections — including timestamp and user ID for each action	High	Compliance
FR-024	The system shall maintain a full audit trail of all leave request submissions and approval decisions	High	Compliance

7. NON-FUNCTIONAL REQUIREMENTS

7.1 Performance

- The system shall support a minimum of 500 concurrent users without performance degradation
- All pages shall load within 3 seconds under normal load conditions
- Timesheet save and submission actions shall complete within 2 seconds

7.2 Security

- All user authentication shall require unique username and password credentials
- Role-based access shall be enforced at the API level — not only the UI level
- All data transmission shall be encrypted via HTTPS/TLS
- User sessions shall expire after 30 minutes of inactivity
- The system shall comply with company data protection policies and applicable labour law requirements

7.3 Usability

- The system shall be accessible via all modern web browsers (Chrome, Firefox, Edge, Safari)
- The interface shall be intuitive enough for non-technical employees to complete timesheet entry without training
- Error messages shall be written in plain language and include guidance on how to resolve the issue

7.4 Availability

- The system shall target 99.5% uptime during business hours (Monday to Friday, 7AM to 8PM local time)
- Planned maintenance windows shall be communicated to users at least 48 hours in advance

8. KEY BUSINESS RULES

ID	Business Rule	Detail
BR-001	Overtime Pay Eligibility	Overtime premium pay applies ONLY to hours worked beyond 40 hours/week on Chargeable projects. Non-Chargeable project employees receive standard pay regardless of hours worked.
BR-002	Timesheet Submission Window	Employees must submit their weekly timesheet by end of business Monday of the following week. Late submissions require manager override to unlock.
BR-003	Leave Balance Enforcement	The system shall not permit submission of a leave request that exceeds the employee's remaining balance for that leave type.
BR-004	Leave Approval Routing	Annual Leave, Sick Leave, Personal Time — routed to Line Manager. Maternity, Paternity, Military Duty, Jury Duty — routed to HR Administrator.
BR-005	Project Chargeability Visibility	Chargeable/Non-Chargeable project classification is visible to Managers and HR only. Employees see only their assigned project names.
BR-006	Rejection Mandatory Comment	Any rejection of a timesheet or leave request must include a written comment from the approver. Rejections without comments cannot be saved.

9. ASSUMPTIONS & DEPENDENCIES

9.1 Assumptions

- Project names and employee-to-project assignments will be provided to the system administrator by project managers via an external process — Timekeep will not manage project creation
- Each employee has one designated Line Manager in the system at any time
- Leave entitlements (annual days, sick days, etc.) will be configured by HR at system setup and annually thereafter
- All employees have access to a web browser and company email address
- The existing payroll system will consume exported CSV data from Timekeep — no direct API integration is required for initial release

9.2 Dependencies

- HR to provide complete leave type list, entitlement rules, and accrual policies before development commences
- Project manager team to provide initial project list with chargeability classification before UAT
- IT team to provision web hosting environment meeting performance specifications
- HR Director sign-off on overtime business rules (BR-001) before development of FR-009 and FR-010

10. RISKS & MITIGATIONS

Risk	Impact	Mitigation
Employee resistance to new system replacing familiar spreadsheet process	Medium — slow adoption reducing data quality	Change management plan; user training sessions prior to go-live; phased rollout starting with one department
Overtime business rule misunderstood or incorrectly implemented by developers	High — incorrect payroll calculations and compliance risk	Business rule BR-001 to be reviewed and signed off by HR Director before sprint. Dedicated UAT test cases covering all overtime scenarios.

Leave entitlement data not provided by HR in time for development	High — blocks development of leave module	HR to deliver leave configuration data 2 weeks before leave module sprint begins. BA to follow up fortnightly.
Scope creep — requests to add payroll integration or mobile app mid-project	Medium — timeline and budget risk	Scope clearly documented in Section 3.2 as out of scope. Change request process to be followed for any additions.

11. ACCEPTANCE CRITERIA

The following criteria must be met for the system to be accepted by the client at UAT sign-off:

- All 24 functional requirements listed in Section 6 have been implemented and verified by the BA through UAT testing
- Business Rule BR-001 (overtime pay eligibility) has been tested against a minimum of 10 scenarios covering both chargeable and non-chargeable project combinations — all passing
- 500 concurrent user load test completed with all pages loading within the 3-second performance threshold
- Role-based access verified — Employee, Manager, and HR roles tested independently to confirm access restrictions are enforced
- Full end-to-end leave request workflow tested for all 10 leave types — submission through approval to balance update
- Audit trail verified — all timesheet and leave actions logged with correct timestamp and user ID
- Client demo completed and formal sign-off received from HR Director and Project Sponsor

12. DOCUMENT SIGN-OFF

Name	Role	Signature	Date
